Note:

Some schools choose to organize their Identification Courses according to plant groupings, ie. Trees, Shrubs, Annuals, Perennials, etc. The intention of this presentation is to provide a framework from which to draw. The approximate number of plants as well as the method of approaching which plants are selected for study is and should be an individual school choice. Our suggestion is that the majority of plants studied come from the combined CANGC/PLANET Certification Test lists included here. However, individual programs should select plants appropriate to their geographical area.

Laboratory Activities: Individual Laboratory Activities are designed to support course objectives.
